Avon Motorsport Formula Ford Tire Specification

As Nova Motorsport has revived production of Avon Motorsport tires over the past two years, steps have been taken to better align products with competitor products currently on the market.

The ACB9 tires commonly used for Formula Ford are now being produced only in the A46 medium-hard compound. Comparative testing with competitor tires, such as the Hoosier VFF, show the A46 ACB9 to be at an equivalent level of performance.

Nova Motorsport asks that your tire regulations for Formula Ford be revised to either remove the compound designation for ACB9 or change it to show the A46 compound as the allowed version of the ACB9.

The tire descriptions for the current ACB9 are:

5.0/22.0-13 AV-ACB9 A46

6.5/23.0-13 AV-ACB9 A46

For reference, the spec numbers for these tires are 17680M and 17681M. Nova Motorsport suggests listing only the tire description within your tire regulations to avoid the need for regulation revisions should Nova Motorsport change our tire spec number system.

Please contact me should you have any questions.
